

ExxonMobil Plant: Local Economic Impacts

INFOGRAPHICS

SUMMARY

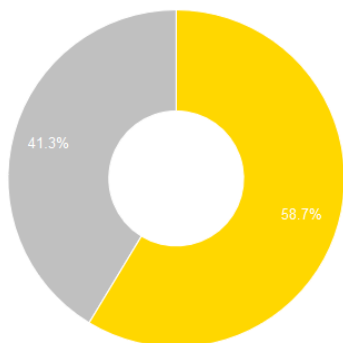

May 2017 On April 19, 2017, Exxon Mobil and Saudi Arabia Basic Industries Corp. (SABIC) announced a joint project of building the world's largest ethylene cracker plant near Portland in San Patricio County. The \$10 billion capital expenditures for the world's largest plastics manufacturing plant will generate a sizeable impact on that county, but its neighboring Nueces County will reap most of the ripple effects. Economic impacts will also vary by industry. Compared to the construction phase, the plant in operation will create a larger multiplier effect due to the permanent nature of the direct jobs that also pay substantially more.

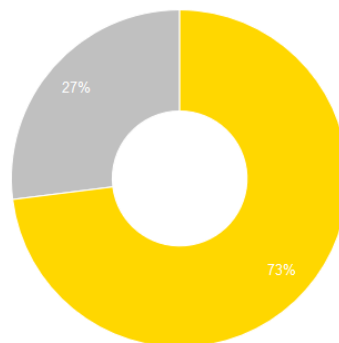

The following presents the data in the Economic Pulse article, [Demystifying the \\$10 Billion Impact](#).

CONSTRUCTION

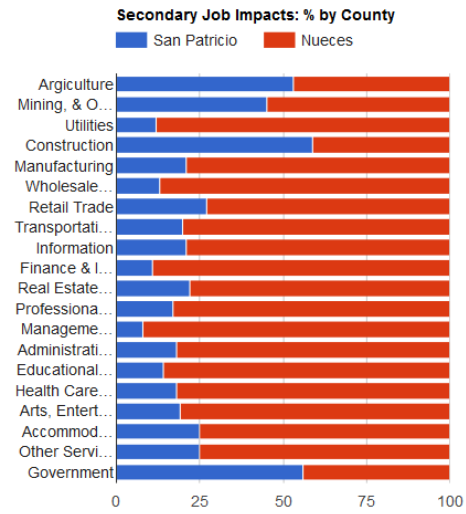

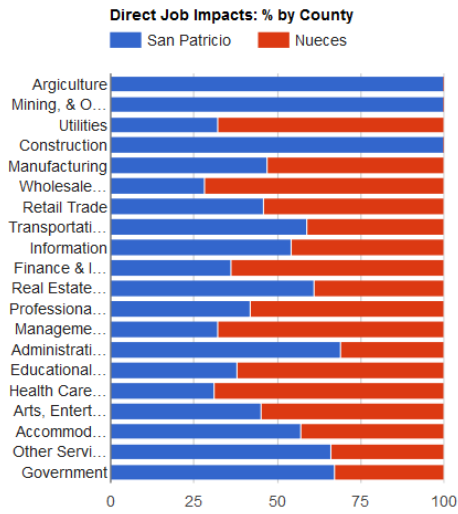

Construction: Job Impact by Impact Type
● Direct ● Secondary

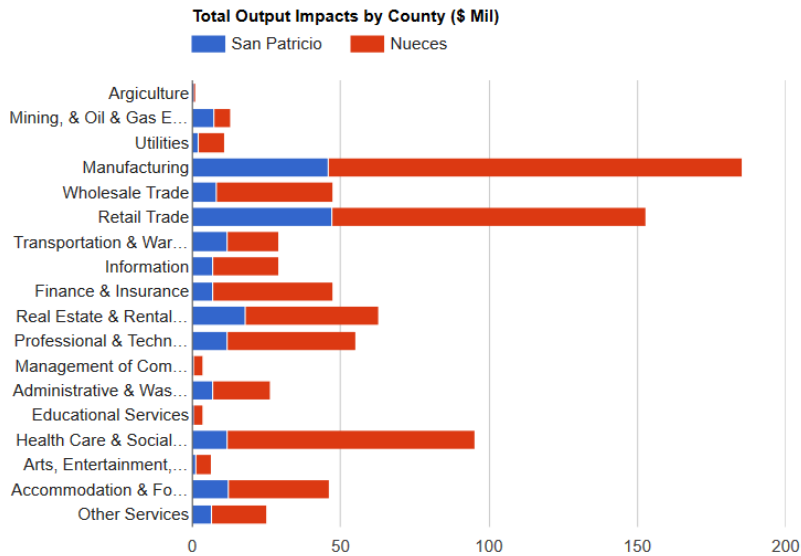

Construction: Job Impact by County
● San Patricio ● Nueces

Direct & Secondary Jobs

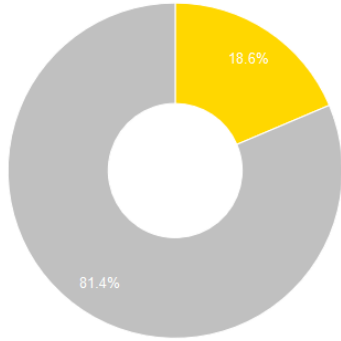

Total Output (Gross Sales) Impacts

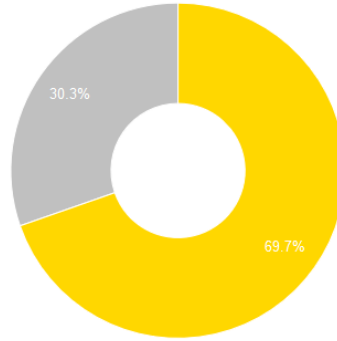

OPERATION

Operation: Job Impact by Impact Type
